Crill itemizes concerns

Editor:

I'd like to pass along the following concerns to those who have the same concerns as I do.

These concerns were brought up at the Feb. 13, 2003, CAG meeting, which you, concerned, never read about in our two local papers. Sad ...

1. The issue of the mill in Thompson Falls receiving asbestos-contaminated logs from Libby that warranted a two-hour safety meeting of it's employee's warning them of exposure to tremolite asbestos from Libby. A misguided lady accused me of being responsible for a mill shutting down in Thompson Falls, supposedly from my letter of concern to the editor. First off, I take no blame for this mill or any mill for shutting down because of a letter of concern I wrote about asbestos exposure of people. If the mill or any mill shut down, it was because of something "they," not me, did wrong or criminal/illegal. In this case, exposed citizens, workers, families and children, a town and an environment to something that will kill them, just as this asbestos has killed generations of families from just living and breathing in Libby. All I did was write a letter and if it meant to warn, inform or protect the people of that mill and Thompson Falls from what has happened here in Libby, so much for any thanks from those misguided people and the misguided lady. By the way misguided lady, the mill I'm talking about it still open for business and exposure. I've requested EPA, CAG and our local servants to address this concern.

2. The issue of spending \$17,000 on a piece of paper to advertise Libby as a beautiful, safe place for the world to live. Not one word on the "sale of Libby" spoke of our asbestos contamination, exposure and death that exists today and for generations to come. It is wrong and criminal to not inform, warn or protect any and all citizens about the dangers and truth from living in Libby, just as we should have been told, warned and protected. This concern I asked EPA, CAG, local servants to do something to stop this false advertising. The truth is Libby is an unfit, unsafe and unhealthy place to live and breath and people must be told who come here. This is why we need to heel the energy.

3. This issue/concern is that families with children are moving here from out of town and moving into contaminated homes, not being warned, informed or protected from asbestos exposure, especially when the home

owner/realtor is aware of the contamination. My concern is two families with children I know, who've moved into contaminated homes and not been told. Nothing being written on either's rental agreements about asbestos in the home. Not only have these families and children being exposed but all their personal property also has become contaminated. This is wrong and also criminal. These homes that are contaminated and become vacant must not be re-livable due to the health dangers to asbestos. I asked the CAG, local servants and EPA to do something about this. A warning to all homeowners realtors who knowingly fail to inform, warn or protect any/all citizens renting or buying a home or protect in Libby, Mont.

4. I'd like to respond to the misguided lady who is advertising Libby on her website as a safe, healthy place to live and raise a family. Folks, this misguided lady has had more of her family tree buried because of asbestos exposure and living and breathing in Libby than I believe anyone else. This misguided lady was the founder and responsible for Libby becoming the worst contaminated site/town in US history of asbestos, she blew the whistle and even put her dying mother on a documentary film to show the world the horrible and painful times of a loved one dying from asbestos, and knew this misguided lady is selling Libby on her Internet. I have to ask, are you including a copy of Dust to Dust when you're telling innocent folks to buy Libby? I used to have a lot of respect for you, misguided lady, for what I thought you stood for, now I'll call you the turncoat, sadly.

And last, this is to Mr. EPA Jim Christiansen stating Libby is a safe place to live, sticking up for the misguided lady's statement on selling Libby, one thing Libby and it's asbestos discussed and dying citizens don't need and will not tolerate is a EPA lying to the people of Libby. By you publicly stating Libby is safe from asbestos danger/exposure, you deserve to be tarred, feathered and your butt run out of town. You're not for the people if you lie about what has happened in Libby. It seems I know more than you do when I can publicly state you are wrong and I can prove it. We need a second opinion and testing other than EPA who can't be trusted, in Libby.

Sincerely and still breathing,
Michael Crill, Libby
